I planned controls 1-7,12 and 13 on the plain near the car park. 14-16, 23 and 24 were in the wooded area South East of the large out of bounds area with its complex path network. The rest were north of the middle road, mostly on point features where vegetation was more a problem and some paths vaguer. 22 was tucked away from the others, just off the path. The optimum straight line route was 6.2k, so possibly all could have been collected in the hour. Well done to John who forsook the low value controls and didn't quite have time to pick them up coming back to the finish. Barry McGowan

"The event itself was excellent, Highgate is a very good area for a score event and conditions were nice and cold and crisp. It should have been possible to get all controls, but no one quite managed it, just as it should be. Thanks to Barry McGowan for planning and doing the spade work and Alison, Richard and John for collecting controls." Barry Houghton
